I'll definitely share. I'm trying to get the batteries top
balanced now before I put them in the box. I didn't
do the math on how long it would take to charge
them all using parallel strings on a normal
household circuit. Waiting on BMS now so I can
switch to series, but I'll crack open the Apexium box
this week.

Test the battery box under various operating conditions and monitor its performance. Regularly check the connections, clean the box, and ensure proper ventilation to maximize the lifespan of your LifePO4 battery. Conclusion. Building a DIY LifePO4 battery box can be a rewarding and cost-effective project. By following the steps outlined in this

Ray Builds Cool Stuff's videos on the Apexium 280 battery box and other battery builds have been very helpful to me. I just got some MG 847 in the mail, and plan to use it to reduce resistance in the connections. I plan to sand the contacts WITH the MG 847 to prevent any new oxidation from forming immediately after the sanding.
